Studioware: Start

This is the primary source for Studioware documentation. Studioware is a project aimed at providing build scripts of the best open source audio editing software available for the Slackware Linux operating system.

It is a powerful suite of multimedia applications for professional audio production, video and photography.

Note: No official (stock) Slackware packages are replaced or removed.

Tell Me More

- Studioware turns your Slackware machine into a full fledged digital audio workstation (DAW).
- SlackBuild scripts for 32 and 64 bit systems available.

- Intended User Base:
    - Recording studios
    - Musicians
    - Photographers
    - Video editors and producers

- Workflows:
    - Audio production, video and photography

- A custom tool to make installation/package management easier:
    - sepkg - Studioware package builder

> 📝 **note** Studioware custom tools use Slackware pkgtools to manage your Studioware packages.

Applications List

Studioware Applications List

Installation

Jump straight to Quick Start

Before you begin installation here are a few things you may want to know:

- Studioware has three main series/categories:
    - Audio
    - Video
    - Photo

> A "Full" install includes all three series/categories. Audio, Video and Photo.

These "series" or "categories" can be installed separately or you can do a full install.

Examples:

- 'sepkg -q full' will download and install everything (full install).
- 'sepkg -q audio' will download and install the audio queue/packages.
- 'sepkg -q video' will download and install the video queue/packages.
- 'sepkg -q photo' will download and install the photo queue/packages.

Please see Quick Start for detailed installation documentation.

Brief descriptions of the installation tool and where to download it:

- Sepkg - Studioware package builder download sepkg

> Things change all the time - source download URLs are moved, sources are deleted, websites vanish etc. If you have any problems, chat to us in #studioware on freenode.
