

I would like to request for you to add a description of what the program does and a link to the original website so more information can be gathered. — [Matthew Fillpot](#) 2012/12/19 17:56

I don't mind doing that but the page needs to be moved from “install_nagios_on_slackware” to something like “nagios_on_slackware”. — [arfon](#) 20121221 4:48pm

--- In my case (v 14.1 stable), I had to change the Loadmodule line at /etc/httpd/mod_php.conf from: LoadModule php5_module lib/httpd/modules/libphp5.so to: LoadModule php5_module /usr/lib/httpd/modules/libphp5.so to get php to work, and so Nagios, to stop getting a “Connection restarted” error on Firefox. Maybe you should point checking that line in order to get php working fine.
