Hello, Few small suggestions:

- Remove the '**install slpkg part**'. Probably you can just say that this can be done with sbopkg or slpkg
- Move the **Important** note about re-login into **< note> </note>** block to improve visability.
- As an alternative approach add just loading **source /etc/profile.d/go.sh**.
- Add the information about the proper shutdown from **rc.local_shutdown**

Done 2-4 out of these. slpkg was what I tested, so I think I'll stick with that part (unless someone writes a slpkg howto I can reference). thanks. — *bifferos* 2018/03/12 21:08 (UTC)
