

Hi,
the method in the article will not work for GPT partition tables that do not contain BIOS boot partitions (new hardware, UEFI).

- [cmyster](#)

Actually, if you use UEFI, you do not need a BIOS boot partition but rather an EFI System Partition (ESP), which is not the same thing. Only those using traditional BIOS with GPT *and* Grub 2 need a 'BIOS boot partition'. I have written another [article about using GPT with BIOS](#). Perhaps [ryanpcmcquen](#) could link his article to mine, to assist such users?

I just added the link myself

Thank you!
