

The resume offset computed by the command in the article is incorrect for me and does not work.

```
sudo /sbin/filefrag -v /swapfile | head -n -3 | tail -n 1 | awk '{print $3}'  
# ^ This is incorrect
```

The correct offset is found in the following article:

https://wiki.archlinux.org/index.php/Power_management/Suspend_and_hibernate#Hibernation_into_swap_file
