Eric, should this article be included in the slackware tag since it is Slackware specific or ommited from that tag since it is a third party application?
— *[Matthew Fillpot](#) 2012/08/31 22:48*

IMHO, the sbopkg page should be moved into the **slackware:** namespace when it is ready. Be aware that articles in slackware, slackdocs and slackbook namespaces are considered as "core" pages" meaning the Wiki editors can make content related changes without prior consultation. For pages in the **howto:** namespace, we will respect page ownership and not make significant content changes without prior consulting of the author. You choose where the article goes. Add a page tag that equals the namespace (slackware, or howtos)
— *[Eric Hameleers](#) 2012/09/01 08:02*

Also, I removed the "*do not edit*" warning, since **talk:** pages are free to edit. That is their purpose.

Thank you for the input, this document will be placed into the slackware namspace when it is complete. Is there currently a way to move a document and the associated discussion pages or will it need to be moved through cut and paste?

>
> > or then again, maybe not: "This plugin is reaching the end of its useful life. It was first created more than 6 years ago before DokuWiki had plugins and metafiles so had to do all the searching for backlinks, forwardlinks and media itself. Based on current reports, it is not able to achieve its main design criterion of maintaining page link integrity." 🙁 — *[V. T. Eric Layton](#) 2012/09/01 13:12*

Also sorry for the "do not edit" tag on this page, I meant it for the primary document.
— *Matthew Fillpot 2012/09/01 12:18*

This document will be revised and published after the sbopkg developers decide how to handle the the new dependency flags and if the dependencies will be handled by default. — *Matthew Fillpot 2012/09/15 19:56*
