

Notes

- On [fr:slackdocs:tutorial](#)
 - Section [Articles complexes](#): add example(s), rephrase. English version kinda hard to understand too.
 - remove the note about templates that are not working for french, when solved.
- Error with tags: check for example the [tag:keyboard](#) page.
- To make < key > not interpreting what's inside teh tag, try enclosing the character in single quotes. for the - key you must type Minus.

(Grabbed from the ML discussion between mattfillpot and alienbob). Maybe add it to the tutorial (if it isn't yet)?

```
<key>' c '</key> // <key>Minus</key>
```

- Add a 'tag handling' part in teh tutorial ?

Special french chars

To be used with the US dead-key layout and a configured special key.

I use the left Win key (keycode 133 = `Multi_key`) in the `~/Xmodmap` file.

ç: , + c

é: ' + e

è: ` + e

à: ` + a

USEFUL ?

Step-by-step for noobs: where do I start ?

This is not a complete guide, but rather helps you getting started with the basics. The goal here is to allow a clean and secure system browsing the internet. Once you get your internet connection working, this wiki will answer ALL your further questions.

1. install: follow complete'n'existing install guide
2. WM basic guide
3. setup basic firewall
4. setup network connections (to consult this site !)
5. setup a browser (needed, as FF's workin out-of-the-box ?)
6. install hardware/software, configure the system and everything else: use the wiki HOWTOS, articles, ...

In general, you want to configure your hardware first. Then your system (boot files, etc), then only the software.
